PROFESSIONAL SUMMARY

Product-focused Full Stack Engineer with 4+ years of experience building and shipping customer-facing software across education, fintech, and e-commerce. Experienced with React, TypeScript, Next.js, Node.js/Express, REST APIs, PostgreSQL, and real-time WebSocket systems. At AbS Technologies, build and maintain production software serving students, administrators, and internal stakeholders, working across frontend and backend to take features from implementation through deployment and production support. Comfortable translating product and design requirements into reusable interfaces, integrating APIs, handling authentication and complex application states, debugging production issues, and improving existing systems as they grow. Also experienced building fintech products involving cryptocurrency wallets, transactions, KYC, P2P trading, and real-time transaction states. Comfortable working closely with Product, Design, and Engineering teams, making pragmatic technical decisions, and owning problems beyond a narrowly defined frontend or backend role.

TECHNICAL SKILLS

Product Engineering: Customer-facing products, end-to-end feature ownership, product/design collaboration, production debugging, iterative development, API integration

Frontend: React, Next.js, TypeScript, JavaScript (ES6+), Redux Toolkit, TanStack Query, Zustand, Tailwind CSS

Backend: Node.js, Express.js, RESTful API design & integration, GraphQL, authentication, WebSockets / Socket.IO

Data: PostgreSQL, MySQL, MongoDB, Prisma

Product Domains: Education technology, fintech, cryptocurrency wallets, payments, P2P trading, e-commerce

Cloud & Delivery: AWS EC2, AWS RDS, Docker, GitHub Actions, CI/CD, Git/GitHub

Engineering Practices: Code reviews, clean architecture, reusable components, technical/API documentation, Agile/Scrum, debugging and production issue resolution.

PROFESSIONAL EXPERIENCE

Full Stack Engineer — AbS Technologies (abstechconnect.com) Mar 2024 – Present

- Build and maintain customer-facing React and TypeScript experiences and Node.js backend services for a production education platform serving students, administrators, and internal stakeholders.
- Work across frontend and backend to implement features, integrating RESTful and GraphQL APIs, third-party services, authentication, pagination, and application error states.
- Translate product and design requirements into reusable, maintainable frontend components while collaborating across Product, Design, and Engineering throughout Agile development cycles.
- Step directly into Node.js backend development when a feature requires API or service-level changes, enabling end-to-end ownership rather than limiting work to the frontend.
- Refactor large areas of the application into reusable, documented components, reducing technical debt and making the product easier to extend as requirements evolve.
- Investigate and resolve production issues across the application stack, improving reliability, performance, and user experience.

- Participate in code reviews and help maintain clean architecture and consistent engineering standards across the codebase.
- Contribute to GitHub Actions CI/CD pipelines and AWS EC2/RDS deployments, supporting reliable delivery of production features.

Frontend Engineer (Team Member) — DigiYo *Jul 2025 – Mar 2026*

- Built responsive React and TypeScript customer-facing interfaces from product and design specifications while maintaining consistency with the platform's shared design system.
- Implemented real-time user experiences using WebSockets/Socket.IO for notification counts, chat indicators, and live feed updates.
- Integrated REST API responses into frontend workflows and handled asynchronous application states.
- Collaborated with backend engineers on API contracts, participated in code reviews, and contributed to sprint planning within an Agile product team.

Frontend Engineer (Team Member) — HelloBob *Nov 2024 – Jun 2025*

- Built customer-facing React interfaces for a mobile cryptocurrency wallet, including wallet balances, transaction history, deposits, withdrawals, and KYC onboarding.
- Integrated REST APIs and WebSocket/Socket.IO events to reflect live wallet and transaction state changes.
- Designed frontend workflows around authentication and edge cases where transaction state and API responses could change asynchronously.
- Built P2P trade-management interfaces covering trade listings, status tracking, and bank-account management against backend API contracts.
- Maintained reliable user experiences across loading, error, and partial-payload states in transaction-critical workflows.

- Participated in code reviews and design handoffs within a cross-functional fintech product team..

PROJECTS

AbS / Education Technology Platform

Production education platform serving students, administrators, and internal stakeholders.

React · TypeScript · Node.js · REST · GraphQL · PostgreSQL · AWS

Worked across frontend and backend to build and maintain production features, integrate APIs, improve reusable architecture, troubleshoot production issues, and support deployment and reliability.

Live: <https://www.abstechconnect.com/>

Jobify — Job Management Platform

Job management platform allowing users to create, edit, and manage job listings with dynamic application status tracking.

- Built with React, Node.js, MongoDB, and REST APIs.
- Implemented workflow states for pending applications, scheduled interviews, and declined jobs.
- Built interfaces for managing dynamic application data and status changes.

4TK Shop — E-commerce Platform

Live: 4tk.shop

Full-stack e-commerce application built for a client.

- Built with React, Node.js, and REST APIs.
- Implemented product search, filtering, sorting, pagination, and product detail pages.
- Implemented payment checkout workflow and frontend handling of purchase-related states.

CERTIFICATIONS

- JavaScript Algorithms and Data Structures, FreeCodeCamp, 2022.
- Responsive Web Design, FreeCodeCamp, 2021.
- Software Development Associate Engineer Certification, Paradigm Initiative, 2019.

EDUCATION

Delta State Polytechnic - HND in Computer Science (in progress)

Delta State Polytechnic — OND. Computer Science **OCTOBER 2023 — 2024** |
DELTA, NIGERIA
